

TITLE OF PAPER:

UIC SAFETY DATABASE: “A METHODOLOGY FOR ACCIDENT ANALYSIS

AUTHOR:

THIS PRESENTATION HAS BEEN PREPARED BY SIMON FLETCHER IN COLLABORATION FRANCO SCHIAVI, THE UIC’S SAFETY DATABASE PROJECT MANAGER

Company: UIC
Country: France

SUMMARY of PRESENTATION

This presentation is made to highlight the significant events that have taken place in the development of the UIC’s Safety Database.

Having moved through a phase in which people were able to get used to the idea of having a central database and agreeing the types of occurrence to be included, how these should be done and agreeing the terminology to be adopted, the next phase is to start to use the data that is being built up. This presentation sets out how that analysis step is being approached and will also explain the different levels of output that will be possible and the benefits that this analysis will be able to deliver to railway companies.
